

Will chocolate be a climate change casualty?

If Ghana and the Ivory Coast — sources for nearly half the world's cocoa supply — experience an annual temperature increase of only 2.3 degrees Celsius, the region will be too hot for cocoa farming by 2050.

Will your **brew** fall victim to **climate** **change?**

The quality of Saaz hops (the variety used to make the pilsner the Czechs are so famous for) has decreased in recent years due to climate change. Warmer weather has shortened the growing season and also caused a drop in the essential acidity of the hops — a key flavor component.

Will **climate change** push **maple syrup** production north?

Anecdotal evidence from harvesters suggests that climate change is moving the maple syrup region north. And researchers from Cornell and Purdue confirm that by 2100, the sweet stuff will likely stop flowing south of Pennsylvania as the earth gets warmer. Harvest time is already moving — the start dates of the maple tapping season are a week earlier than in 1970.
